

BUILDING INFORMATION MODELING

Providing our clients with the benefits of advanced technologies is part of our basic services. We help educate our clients on how to aptly apply advanced technologies. BIM enables project teams to create and coordinate within a three-dimensional platform.

Our BIM projects include buildings with a variety of framing systems and complexities across a range of market sectors. We encourage the sharing of models among all design team members in order to fully utilize the coordination potential.

When appropriate, we encourage the participation of general contractors in BIM efforts and help enable subcontractors to streamline production.

Seattle Children's Phase I Hospital Expansion

Bellevue High School Structural/MEP Coordination

University of Washington Husky Union Building Renovation and Addition
